- High capacity: it is compliant with SATA 1.5/3/6 Gbps hard disks-SSD from 10 Mo to 1 To or more to backup high definition photos, valuable data, etc.

Minimum system required

PC computer with USB v3.0 port with Windows XP/VISTA/7

Hardware installation

Press and maintain the button in the direction of the arrow towards the external side, then pull over the arm to open the enclosure. Insert hard disk and check that SATA connectors of the enclosure are opposite to SATA connectors of the hard disk drive.
Do not force: a mechanism avoids a wrong insertion of the hard disk on the SATA cable. It is impossible to mislead. If you don't know, ask for help your reseller.
Close the enclosure. Connect it to your computer USB port. Windows 7-VISTA-XP will automatically install the driver and will add a local or movable hard disk associated with a new letter. Otherwise, check if you have formatted the hard disk.

Hard disk initialization

-For a brand new hard disk, you should proceed as follow:
If you install un-partitioned or un-formatted new drive, it does not automatically appear in **My Computer** the first time. Please follow these steps: right click on **My computer**, choose **Manage** then choose **Disk management** in **Storage**. The operating interface will show on the computer, Sub area **Format** following the operating interface. Go to **My Computer**, locate the removable disk, right click on it, and select **Format** from the drop-down list, follow the instructions to complete the formatting process. Once the hard disk has been formatted and activated, you can use it.
-For a hard disk which had already been formatted:
Go to **My computer**, you should see the removable disk. Warning: backup your data before formatting the hard disk. Right click and choose **Format**, follow the instructions on screen.
After the reboot, there will be a new letter assigned to the hard disk.

Safe removal of the external enclosure USB

To remove safely the external enclosure, click on the green arrow below the left taskbar.

Click on **Safely Remove Hardware**.
If you cannot manage to safely remove, close **My computer**, all windows and all applications.
